What are the Causes of Excessive Hair Growth ?

The causes of excessive hair growth are many and varied, including : Heredity, Pregnancy, Glandular and/or hormonal imbalances, including diseases, causing these effects (i.e. PCOS condition in women), Insulin resistance issues Thyroid problems, Reactions to certain medications, Normal aging processes e.t.c .

Do I need any blood tests before starting laser treatment ?

Before starting laser treatments, patients with excessive hair growth on uncommon areas should explore possible underlying medical reasons for it. Women with facial male-pattern growth are advised to see an endocrinologist to explore the possibility of PCOS or elevated testosterone levels. Men experiencing excessive growth can get tested for insulin resistance.

Laser Hair Removal

www.skinclinicagra.com

Any medical laser procedure can be a bit intimidating. Learn more about the Soprano Pain-Free, Hair-Free™ so you'll feel at ease with the procedure.

What is Laser Hair Removal?

Laser hair removal is a procedure which removes hair from the body utilizing a long pulse laser.

Am I a Candidate for Laser Hair Removal?

Both men and women seek laser hair removal to remove unwanted hair. Laser hair removal is commonly done on underarm, pubic area, legs, abdomen, lip, chin, back, buttocks, thighs, face, neck, chest, arms, and toes. The only time laser hair removal will not work for you is if your hair is too fine (like Peach fuzz) and/or too light in color, such as gray and blonde hair.

Is Laser Hair Removal Painful?

Generally, laser hair removal is not as painful as waxing, though the sensation is different. Pain is only felt while laser is hitting the skin and doesn't last.

How does The Soprano Laser Hair Removal work?

The Soprano uses gentle light to damage the hair follicle. This disables the follicle from growing hair, which means that gradually over several treatments, there is a permanent reduction in the amount of hair in that area.

Is treatment with The Soprano safe?

Laser hair removal is the most popular aesthetic procedure performed annually. There are many advances in the Soprano technology that make it one of the safest laser hair removal systems available for all skin colors.

What's The Pain-Free, Hair-Free™ treatment?

The Pain-Free, Hair-Free™ treatment has provided safe and effective permanent hair reduction for thousands of patients worldwide. Because Pain-Free, Hair-Free™ utilizes our IN-MOTION™ and low-heat settings we're able to provide a level of safety unlike any other laser hair removal procedure. In addition, a patented DualChill™ mechanism ensures the surface of your skin stays cool and comfortable throughout your treatment.

What kind of results can I expect from The Soprano treatment?

Each Soprano treatment will result in less hair coming back, as well as hair growing progressively lighter in color, finer and slower-growing with each treatment. Most people achieve satisfactory clearance after 6 - 8 treatments, but individual results vary depending on medical and genetic factors.

How many treatments will I need?

Typically, 6 - 8 treatments are adequate to provide permanent hair reduction should continue treatments until remaining hair are too fine for laser to target, or until they've reached your desired reduction. It's not unusual to require a touch-up treatment two years after completing laser hair removal treatments.

Will my hair ever grow back?

Actively growing hairs that are treated should not grow back. Once a hair follicle is damaged it cannot grow hair. It's also not unusual for patients to have a touch-up two years after initial treatment due to hormonal changes.

Do I need to arrange time off from work for treatments?

No. The Soprano treatment has no "down time" and requires no recovery time. You can have your treatment and return to work, school or other normal activities immediately.

Should I shave before the treatment?

Make sure that the area that's about to be treated gets completely shaved the night before your treatment so that the laser energy is targeted towards the hair follicle and not wasted it on the hair above the skin's surface.

What happens after each treatment?

Temporary pinkness in the skin lasts a very short time and most people return to work and/or normal activities immediately after treatment.

Are there any laser hair removal risks or side effects?

Some people may experience the following potential temporary side effects: Itching, Redness for up to 3 days, Swelling around mouth of follicle for up to 3 days, Tingling or feeling of numbness, Temporary pigment change on darker skin.
